Increase
  Decrease
  No Change

Changes in indicators were measured by assessing whether the data point from the 2000 U.S. Census fell within the margin of error from the 2012-2016 American Community Survey. If the data point from 2000 was smaller than the lower bound of the 2012-2016 margin of error, we recorded an increase. Conversely, if the data point from 2000 was larger than the upper bound of the 2012-2016 estimate, we recorded a decrease.

**Table 2. Zip Code Health Rankings Overall and by Category: Healthy Communities Foundation Service Area**

Zip Code	Overall Rank	Health Outcomes	Health Behaviors	Clinical Care	Social & Economic Factors	Physical Environment	City

3. Not to exceed  $35 \mu\text{g}/\text{m}^3$  per the Environmental Protection Agency daily standard

# Appendix

# Zip Code Health Rankings Methodology

---

We adapted the methodology of the national County Health Rankings to create the *HCF Zip Code Health Rankings*. The County Health Rankings are constructed from statistical measures of Health Outcomes (length and quality of life) and Health Factors (determinants of health) such as smoking, obesity, access to healthy foods, teen births, income inequality, and air and water quality.

The County Health Rankings research team developed the weighting and ranking system to be consistent with scholarly research on the impact of various factors on health outcomes and pragmatic in the selection of factors that can be modified through community action. To design their approach, the researchers carefully considered the methodology and indicators of America's Health Rankings,<sup>1</sup> selected reliable indicators available at the county level nationwide, and collected feedback from a national panel of technical experts. The methodology is further described in a working paper,<sup>2</sup> publications,<sup>3-8</sup> and the details of calculating scores and ranks available on the County Health Rankings & Roadmaps website.<sup>9</sup>

We used the majority of the County Health Rankings measures for the *HCF Zip Code Health Rankings*, with slight modifications (see list of measures in the table below). We added important urban health variables (e.g., pediatric blood lead poisoning and vacant housing units), for which reliable data are available for each zip code within the HCF service area. We collected zip code tabulation area (ZCTA)-level data from state and national data sources (described in the Data Sources section and identified in the table below). Using County Health Rankings weighting and ranking methods, we rated the health of the ZCTAs and computed a ranking for each ZCTA. The purpose of the rankings is to increase awareness of the factors that influence health and demonstrate how health may vary among the ZCTAs.

We ranked each ZCTA relative to the health of the other ZCTAs within the HCF service area. The nine scores that are calculated and ranked are:

1. Overall Rank
2. Overall Health Outcomes
3. Health Outcomes: Chronic Conditions
4. Health Outcomes: Quality of Life
5. Overall Health Factors
6. Health Factors: Health Behaviors
7. Health Factors: Clinical Care
8. Health Factors: Social & Economic Factors
9. Health Factors: Physical Environment

## Data Sources

The *HCF Zip Code Health Rankings* data sources include state and national agencies such as the Illinois Department of Public Health and the U.S. Census Bureau. Other data sources include public and private sources that use data from national hospital databases, national surveys, and surveillance systems such as the Behavioral Risk Factor Surveillance System. These sources include:

- U.S. Census Bureau American Community Survey<sup>10</sup>
- Illinois Hospital Association COMPdata Informatics<sup>11</sup>
- Policy Map, a data warehouse and GIS solutions provider<sup>12</sup>
- Community Commons, an award-winning mapping and data visualization center<sup>13</sup>

## Calculating the Rankings

The statistical data for the *HCF Zip Code Health Rankings* measures are commonly reported as percentages and ratios. To uniformly calculate the rankings, we standardized each health measure using a z-transformation (i.e., normalized):

$$z = \frac{(\text{ZCTA Value}) - (\text{Average of ZCTAs in Service Area})}{(\text{Standard Deviation of ZCTAs in Service Area})}$$

We used reverse coding (i.e., multiplied the z-score by -1) when necessary to ensure lower scores always indicated better health. We computed composite scores by summing the weighted z-scores, such that:

$$\text{Composite} = \sum w_i z_i$$

The lowest composite score is ranked #1 for the ZCTA with the best overall health and the highest composite score is ranked #27 for the ZCTA with the worst overall health within the HCF service area.

## Measures and Data Sources for the HCF Zip Code Health Rankings

Indicator	Description	Source	Year
Adults with asthma	Estimated percent of adults reporting current asthma	Policy Map	2013
Adults with COPD	Estimated percent of adults ever diagnosed with chronic obstructive pulmonary disease, emphysema, or chronic bronchitis	Policy Map	2013
Adults with diabetes	Estimated percent of adults ever diagnosed with diabetes	Policy Map	2013
Adults who have had a stroke	Estimated percent of adults ever diagnosed with a stroke	Policy Map	2013
Adults with high blood pressure	Estimated percent of adults ever diagnosed with high blood pressure (hypertension)	Policy Map	2013
Adults with fair or poor overall health status	Estimated percent of adults reporting fair or poor health in the past 30 days	Policy Map	2013
Adults with frequent poor physical health days	Estimated percent of adults reporting 7 or more days of poor physical health in the past 30 days	Policy Map	2013
Adults with frequent poor mental health days	Estimated percent of adults reporting 7 or more days of poor mental health in the past 30 days	Policy Map	2013
Low birthweight or premature births	Percent of low birthweight or premature birth outcomes (Diagnosis Related Group codes 790-792) of all live births (Medical Diagnostic Category 15)	COMPdata Informatics	2014-2017
Adult obesity	Estimated percent of adults who are obese based on self-reported weight/height (a body mass index of 30 or greater)	Policy Map	2013
Adults who currently smoke	Estimated percent of adults who report smoking cigarettes regularly	Policy Map	2013
Adults who are not physically active	Estimated percent of adults reporting to be physically inactive in the past 30 days	Policy Map	2013
Adults eating <1 fruit/vegetable serving per day	Estimated percent of adults reporting to eat less than 1 serving of fruit/vegetables per day	Policy Map	2013
Adults reporting heavy drinking	Estimated percent of adults reporting heavy drinking in the past 30 days (defined as having 2+ drinks per day for men or 1+ drink per day for women)	Policy Map	2013
Adults reporting binge drinking	Estimated percent of adults reporting binge drinking in the past 30 days (defined as having 5+ drinks for men or 4+ drinks for women in one occasion)	Policy Map	2013
Population living in food desert	Percent of the population living in an area designated as a food desert (defined by both low-income (poverty rate is 20% or greater) and low-access (at least 500 people or 33% of the population is >1 mile from the nearest grocery store for an urban area or 10 miles for a rural area))	Community Commons	2015
Teen births per 1,000 population	Number of women aged 15-19 years with births in the past 12 months per 1,000 female population	American Community Survey	2012-2016
Population without health insurance	Percent of the civilian noninstitutionalized population with no health insurance coverage	American Community Survey	2012-2016
Adults with primary care doctor	Estimated percent of adults reporting to have a personal doctor or health care provider	Policy Map	2013
Adults with routine checkup in past year	Estimated percent of adults reporting that they received a physical checkup in the past year	Policy Map	2013

Indicator	Description	Source	Year
Preventable ED visits	Percent of emergency department visits that was required based on emergent nature of the condition but potentially preventable if timely and effective ambulatory care had been received previously (e.g., asthma flare-ups, diabetes, congestive heart failure)	COMPdata Informatics	2014-2017
Adults with high school diploma	Percent of the population aged 25 years and over that are a high school graduate or higher	American Community Survey	2012-2016
Adults with bachelor's degree	Percent of the population aged 25 years and over that have a bachelor's degree or higher	American Community Survey	2012-2016
Unemployment rate	Percent of the population aged 16 years and over that are in the civilian labor force and are unemployed	American Community Survey	2012-2016
Median household income	Yearly median income per household within a given population (2016 dollars)	American Community Survey	2012-2016
Income inequality (Gini Index)	Estimated inequality of household income according to the Gini Index, which measures income distribution among residents of a specified geography. A value of zero indicates perfect equality of income (all households having equal income) and a value of 1 indicates perfect inequality (one household having all of the income).	Policy Map	2012-2016
Children in poverty	Percent of all children under 18 years of age that have been living below the poverty level in the past 12 months	American Community Survey	2012-2016
Single-parent households	Percent of households with a male householder (no wife present) or a female householder (no husband present) with own children under 18 years of age	U.S Census	2010
Population without U.S. citizenship	Percent of a population that is not a U.S. citizen	American Community Survey	2012-2016
High risk for pediatric blood lead poisoning	Zip codes where children aged 6 years or younger are considered to be at high risk for lead exposure based on family economic status (200 percent poverty and below) and age of the housing unit	Illinois Department of Public Health	2015
Average daily particulate matter	Average daily density of fine particulate matter in micrograms per cubic meter (not to exceed 35 $\mu\text{g}/\text{m}^3$ per the Environmental Protection Agency daily standard)	Community Commons	2012
Vacant housing units	Percent of vacant housing units out of total housing units	American Community Survey	2012-2016
Substandard housing units	Percent of owner- and renter-occupied housing units having at least 1 of the following conditions: 1) lacking complete plumbing facilities; 2) lacking complete kitchen facilities; 3) with 1.01 or more occupants per room; 4) selected monthly owner costs as a percentage of household income >30%; or 5) gross rent as a percentage of household income >30%	Community Commons	2011-2015
Commute to work over 1 hour	Estimated percent of workers aged 16 years or older who did not work at home with a commute to work of more than 1 hour	Policy Map	2012-2016

### Demographic Characteristics of Zip Code 60130 (Forest Park), 2000-2016

	2000 <sup>1</sup>	2007-2011 <sup>2</sup>	2012-2016 <sup>2</sup>
